

Dealers Consider It THE PERFECT MISMATCH

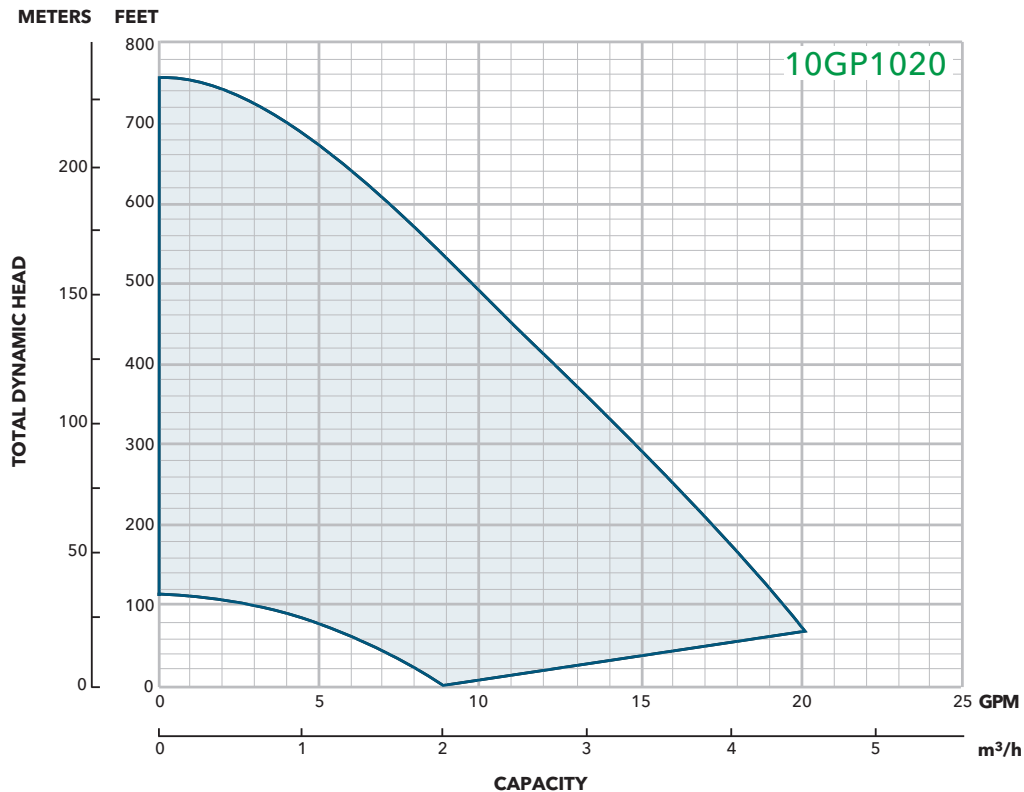

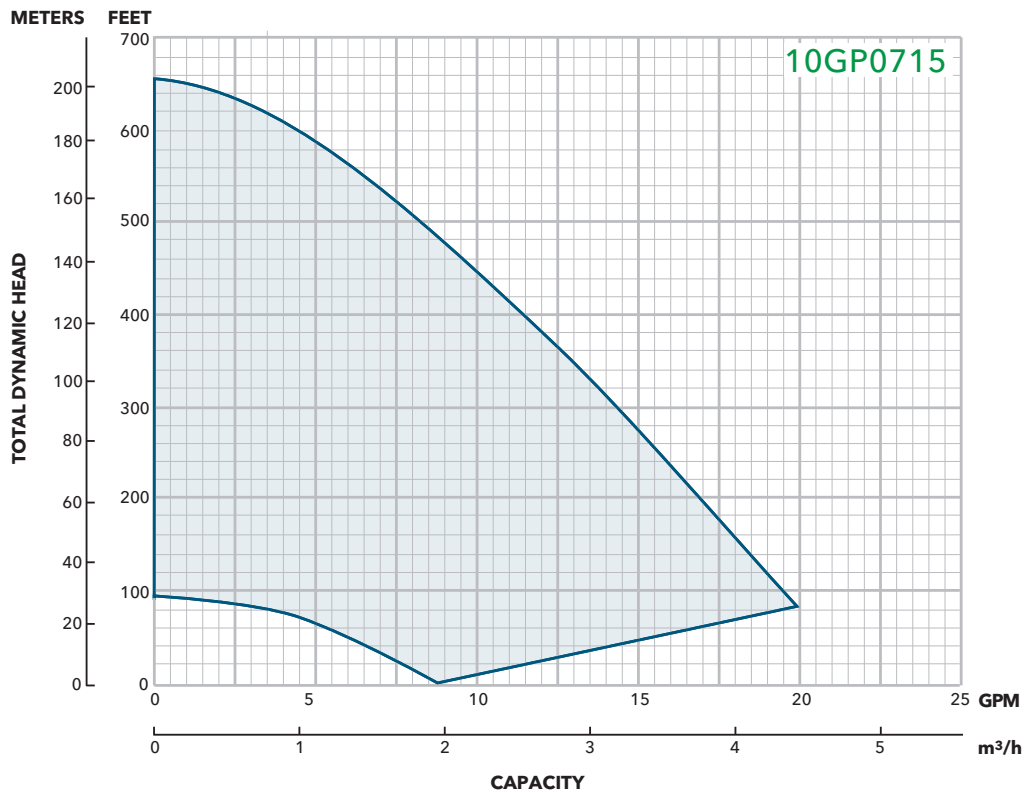

Take a deeper
look at our new
ProPak kits, which
serve more
applications and
reduce inventory

The Goulds Water Technology ProPak kits, also known as a “mismatched pump/motor combo” integrates a small pump with a larger motor, operated by a SOLO² drive for constant pressure. Thanks to the mismatched motor and additional stages in the 10GS, these combinations can run up to 80 Hz, producing a broader performance curve, which allows for more applications to be served with a single solution.

10GP0715 AND 10GP1020 PROPAC FEATURES:

- Sizing and installation are simple and fast.
- The wiring is as easy as a standard three-wire control box.
- Factory preset pressure of 60 psi with simple, fast field adjustability for higher pressures.
- Three-phase output to the motor reduces wire cost.
- 10 GPM liquid ends now come standard, with increased staging for 0.5 hp – 1.5 hp, to further extend applications.
- A fully wired transducer is included with grounding provisions.
- Mismatched kits are configured for 30-80 Hz for maximum operation.
- Wiring simplified to L1, L2 and Ground in from power supply. Red, Yellow, Black and Ground out to motor.
- **Standard components include:**
 - A switch input for connecting a pressure switch or float switch
 - Dry well sensitivity switch
 - Low pressure cut-off protection
 - 5 or 20 PSI pressure drop restart switch

Pressure tank is not included in the ProPak kit and must be ordered separately
